

Effectively organizing and managing meetings

An integrated solution by Bosch and MVI AudioVisual

Challenges

Professional meetings often require extensive preparation times. Depending on the nature of the event, several prerequisites need to be defined and integrated into the conferencing workflow before the actual meeting can start. This process can sometimes be difficult and time-consuming. In addition to common tasks such as preparing the agenda and attendance list, creating voting scripts, determining the best room layout on site and deciding how to display content on various screens, there are increasingly complex challenges to solve. These challenges include integrating remote participants in hybrid meetings, how to broadcast or record, assigning special roles, and much more.

Market requirements

Conferences are most effective when all conferencing devices, different media types and functionalities are available and accessible – implemented in an easy-to-operate, tamper-free and failure safe solution that is also capable of documenting the meeting and the corresponding results.

In partnership with

Our Solution: Seamless integration comprising all functionalities

The DICENTIS conference system offers a seamless integration of all required functionalities, maximizing speech intelligibility to make your meetings more efficient and more productive. With an IP- and server-based architecture, it is built on open standards to ensure a high degree of flexibility, superior audio performance for up to 100 languages, and the ability to integrate seamlessly with third-party solutions. The system harnesses the most powerful security protection on the market to safeguard sensitive data throughout the conference chain.

MVI solution: Meeting preparation, meeting information, remote participation and customized user interface

The MVI AudioVisual Software Suite consists of four distinct products, as shown below. These applications work perfectly together with the DICENTIS Conference System of Bosch.

EasyConf has a simple user interface to control all aspects of the conference system like starting voting sessions, control microphones and ID card programming. It contains easy meeting preparation for your conference system, by Excel and support for connectivity to local government systems.

EasyConf Connect allows remote delegates to participate in council meetings as if they were physically present. They can request the floor and cast a vote, just like being in the room. This is a consolidated solution for running effective hybrid council meetings.

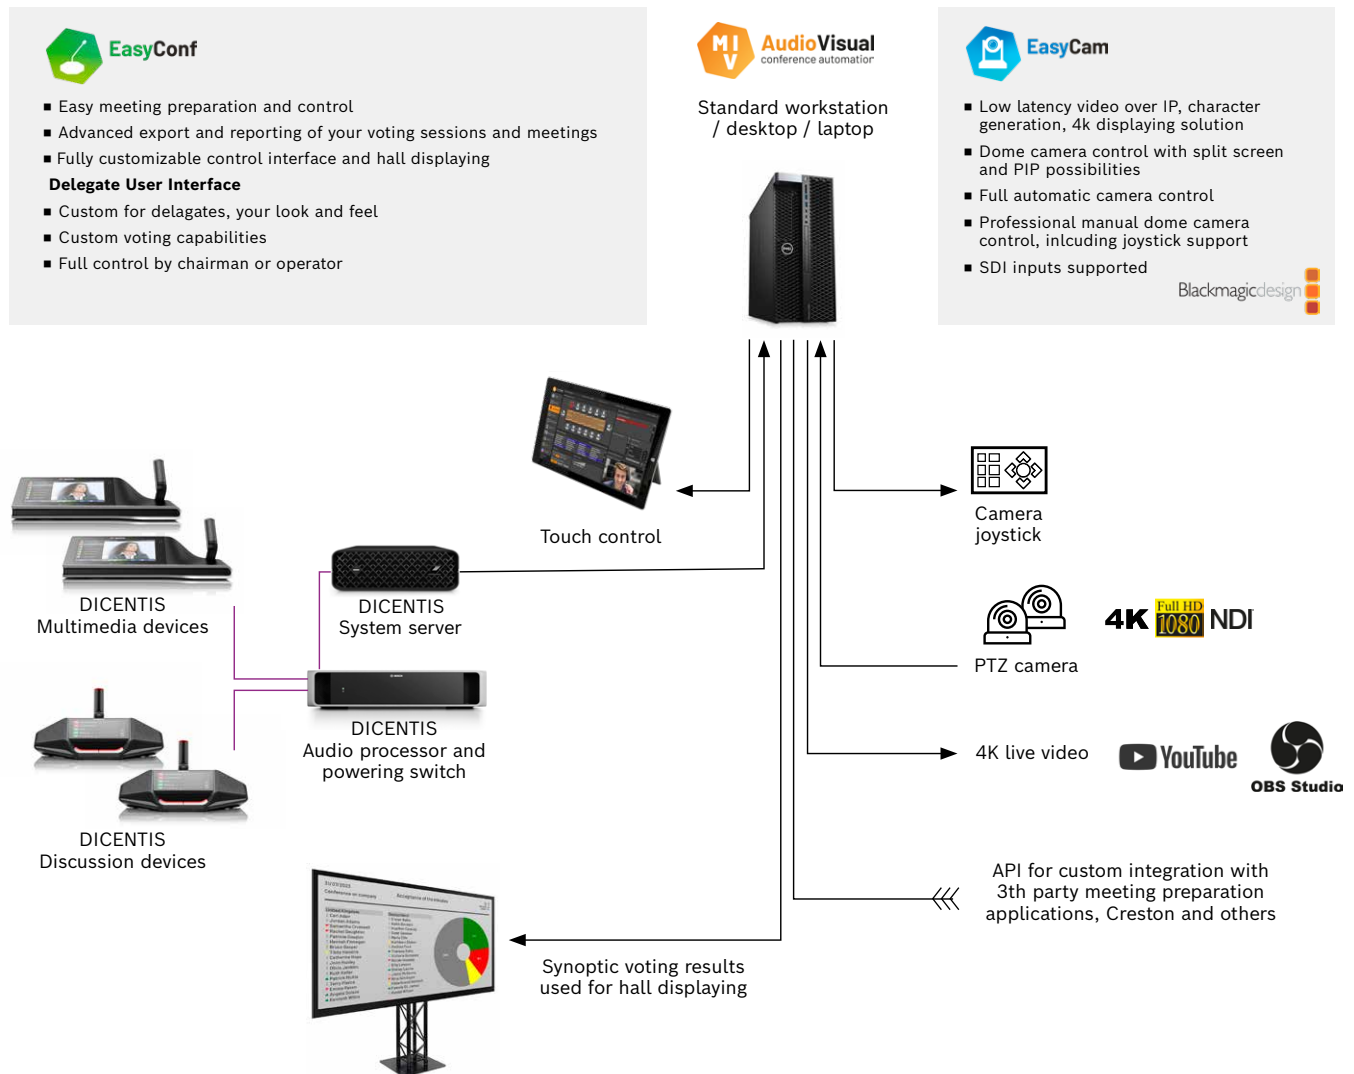

EasyCam offers controlled and broadcasted meetings or conferences in HD or 4K quality. The innovative, automated camera tracking system works with all leading camera suppliers, eliminating the need for an operator. Participants, voting results, agendas, presentations can be automatically displayed in multi-, split-screen or picture-in-picture format. Extra info is automatically added to each speaker, such as speaking time, delegate name and political party.

EasyConf DelegateUI provides a customizable user interface for meeting delegates. You can incorporate your logos and your house style into the conference system design. It offers custom voting screens and voting options as well as a personalized welcome screen and login mode. The screen background can be unique per country or political party and you can choose between full-screen or windowed live video and presentation feeds. The chairman/operator can control which content the delegates are viewing, including the live video, welcome screen, or current agenda. During a voting session, delegates are focused solely on casting their votes and observing the voting process without distractions.

System Example:

Benefits for the end user (chairpeople, participants and operator)

- Utilize your prepared meeting agenda directly from your **meeting management** system such as GO, Parlaeus, Notubiz or iBabs directly into the AV system of your council chamber
- The **meeting can be prepared in advance** by setting up the agenda, creating the vote questions, preparing delegate data, a speaker list, and much more
- Online live streaming of audio, video and data
- Full **paperless** integration: All reports are stored as PDF. Third-party export to local government systems is supported
- The MVI app supports participants during meetings and allows them to **participate remotely**, cast a vote etc.

Benefits for the system integrator/installer:

- Complete, **seamlessly integrated solution** with our official integration partner MVI
- Peace of mind** by tested and approved solution
- User-friendly, customizable solution with comprehensive features
- Supports SDI video ingestion through Blackmagic capture cards or direct video ingestion through H.264 and H.265 streams, as well as direct video source ingestion through NDI
- Easy installation and configuration
