# Mid-Large Meeting Room

More efficient meetings, less cabling maintaining superb sound quality and social distancing

Efficient meetings require focus. And a great meeting/board room environment requires sound reinforcement to maintain intelligibility and ensure uniform sound distribution across the room with precise control. Create the right listening environment for presentations, videos and meetings with full room control (via Crestron) for power, volume, source selection and bass enhancement as well as full integration with the DICENTIS Wireless conferencing system for zero interference.

- ▶ Smart Wireless Management allows the conference system to constantly monitor the availability and load of channels. When traffic increases it seamlessly and automatically switches to free channels, without interruption or interference.

- ▶ Further conferencing functions include discussion with different selection of mics, voting identification and camera control while also supporting integration with Zoom, Google Meet, Microsoft Teams and Skype platforms.
- ▶ Loudspeaker systems such as the LC2 premium commercial loudspeakers provide superior acoustics for this type of meeting space. The perfect addition to these loudspeakers is the PLENA matrix – ensuring excellent sound thanks to a smart equalizing approach and built-in limiters.
- ▶ For large meeting rooms and higher loudspeaker wattage requirements there is the ability to bridge multiple PLENA Matrix amplifier channels.
