Small Meeting Room

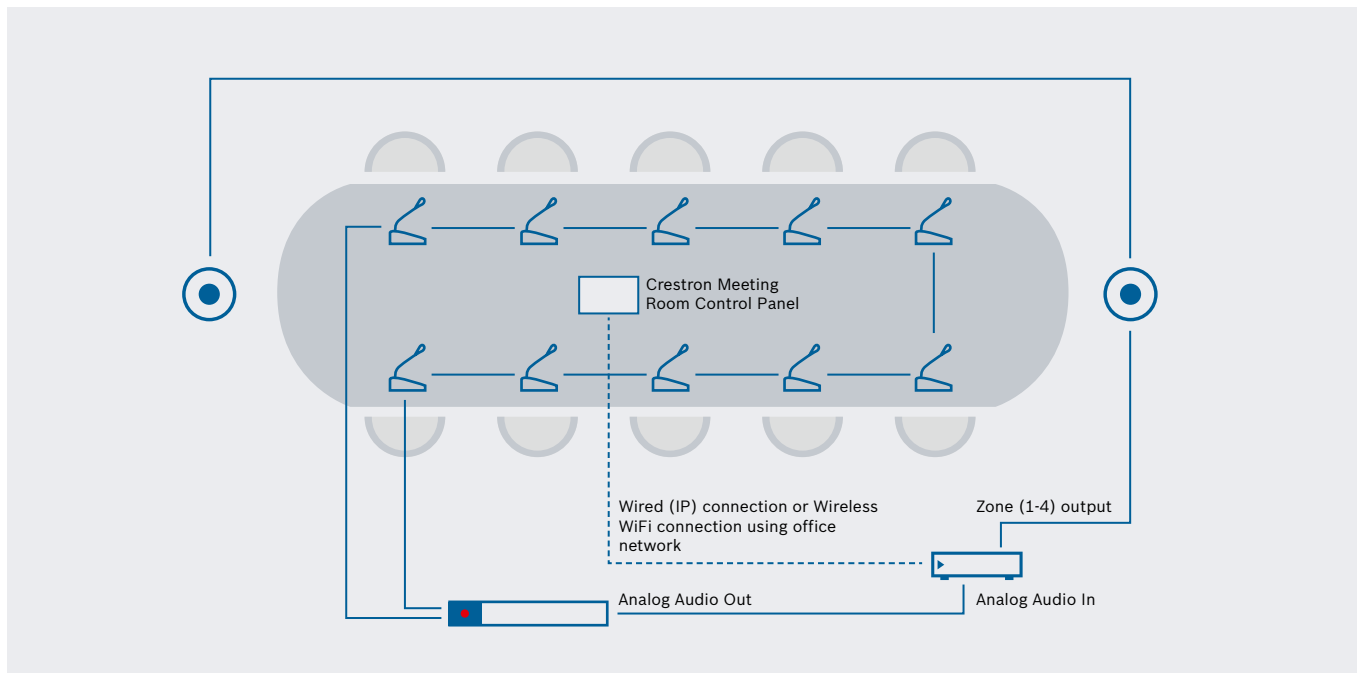

Efficient meetings with superb sound quality and speech intelligibility

Efficient meetings require focus. And a great meeting/board room environment requires sound reinforcement to maintain intelligibility and ensure uniform sound distribution across the room. Ensure a proper listening environment for presentations, videos, and meetings with full room control (via Crestron) for power, volume, source selection and bass enhancement.

► Audio input controls include multi-band equalizing, gain control, and dynamic range compression on each input as well as full integration with CCS1000D conference system.

► Conferencing functions include discussion, camera control and audio recording, while also supporting integration with Zoom, Google Meet, Microsoft Teams and Skype platforms.

► Loudspeaker systems such as the LC2 premium commercial loudspeakers provide superior acoustics for this type of meeting space. The perfect addition to these loudspeakers is the PLENA matrix – ensuring excellent sound thanks to a smart equalizing approach and built-in limiters.

LEGEND	
	Premium ceiling loudspeaker LC2-PC30G6-8
	PLENA matrix amplifier PLM-4P125
	CCS1000D Conference Unit CCS-DS or CCS-DL
	CCS1000D Control Unit CCSD-CU or CCSD-CURD
