DICENTIS Conference System
Conference Systems by Bosch

For over 130 years, the Bosch name has been synonymous with innovation, quality and reliability. Building on true world-class expertise, Bosch Security Systems has led the conference market for over 65 years. How? By fulfilling customer needs with outstanding products, and the promise of continuing to do so for many years to come.

The market for conference solutions has changed rapidly in recent years, with a trend away from standalone systems towards fully integrated solutions. In these integrated solutions, information such as audio, video, social media and meeting data is shared over standardized infrastructure and interfaces. This in turn has created higher demands on flexibility in system design and the ability for remote interaction. These trends highlight the need to maximize meeting efficiency and increase ease of integration with third parties.

Bosch is committed to deliver the most innovative conference platform to fulfill current and future market needs. This is why Bosch introduced its IP-based product family: DICENTIS. DICENTIS is a revolutionary platform for the integrated conference world of tomorrow.

The DICENTIS conference solution is ideal for a wide variety of uses, from small-sized organizations to multinational corporations, as well as local to national governments and international summits.

Today, more is required from a conference system. It must support video, social media, remote interaction and expandability.
DICENTIS Conference System | 5

DICENTIS is built on open standards enabling the integration of many different technologies, even third party solutions.

The system that grows with your needs

- Open platform based on the OMNEO media networking architecture for system flexibility and cost-effective installation and maintenance
- Easy integration with supporting systems to provide features such as automatic camera control
- License-based expandability for a future-proof system that can easily take on new functionality
- Optimized user experience to maximize meeting efficiency
- Simultaneous interpretation of up to 100 languages
- Cable and power supply redundancy to ensure meetings are held without system interruption

Future-proof via system flexibility
No matter how your organization changes, your DICENTIS Conference System will adapt to answer your evolving needs. That’s because DICENTIS is built on open standards that make the integration of several technologies possible, even third party solutions. For example:
- Ethernet and IP are used so existing infrastructures can be reused
- OMNEO is used so DICENTIS can connect to other audio and control equipment
- Android™ in the DICENTIS Multimedia device enables the use of custom Android™ applications

Cost-effective
At its heart, the DICENTIS Conference System makes use of the unique IP-based OMNEO media networking architecture, developed by Bosch, and operates over fully standardized Ethernet networks. This ensures flexibility and cost-effective installation and maintenance. It also makes DICENTIS ideal for re-using existing infrastructure. Conference devices can be connected with a looped daisy chain configuration using Bosch powering switches and Bosch system network cables. This provides a time-saving, flexible solution. Alternatively, CAT5e (or better) cables and standard Power over Ethernet (PoE) switches enable star configurations.

What is OMNEO?
OMNEO is an architectural approach to connecting devices that need to exchange information such as audio content or device control. Built upon multiple technologies, including IP and open public standards, OMNEO supports the technologies of today - such as Audinate’s Dante™ - while adopting the standards of tomorrow. OMNEO offers a professional-grade media networking solution that provides interoperability, unique features for easier installation, better performance, and greater scalability than any other IP offering on the market.

Configured to your needs
Each organization that uses a conference system has its own unique set of requirements, that’s why the DICENTIS Conference System offers a wide choice of functions. Take a look at the table below to see what kind of system solution you could take advantage of.

Automatic camera control
The DICENTIS system supports multiple IP camera control protocols (e.g. ONVIF), simplifying the integration of automatic camera control. ONVIF is the market’s leading, global standard for networked video, and it ensures that conference participants always see the person speaking on the hall display. In addition, DICENTIS also supports Sony and Panasonic cameras with CGI protocols.

Environmentally friendly
DICENTIS is designed to have minimal impact on the environment. For this reason, the system can be switched to stand-by mode. This patent-pending feature allows the chairperson to power off all the participant devices at once, significantly reducing power consumption and saving energy between meetings and during breaks.

Highly reliable and secure
Inherent cable and power supply redundancy built into the DICENTIS Conference System, ensures no data is lost in the rare event of system failure. In addition, all audio and control data running through the system is securely encrypted by proven industry technologies, satisfying the most stringent and internationally recognized standards. This protects data against tampering and unauthorized access – extremely important in highly-secure or sensitive meeting situations.

Latest functionality - always
With regular software updates, the DICENTIS Conference System easily expands to incorporate newly-developed functionality - without the need for expensive hardware replacements. This includes the licensed system and seat software but also additional system features via third-party Android™ apps. Bosch offers a Software maintenance agreement (SMA) to help customers maintain their system. This service keeps the entire DICENTIS Conference System operating seamlessly across the platform and servers. It includes software and compatibility plug-ins for the system as well as a variety of Internet-based applications.

The new standard in conferencing
that does it all: discussion management, language selection, voting, multimedia functions, live video feed, dual use, internet access, document viewing, third party apps and more.

---

*Automatic camera control is a system feature. The DICENTIS system supports multiple IP camera control protocols (e.g. ONVIF), simplifying the integration of automatic camera control.*

*The multimedia functions of the DICENTIS Multimedia device are document viewing, internet access, presentation viewing, live video feed and the use of third party Android™ apps.*
Unique conference devices with industry-leading features

Focus on the discussion at hand

- High directive microphone and intelligent Acoustic Feedback Suppression ensure crystal clear speech reproduction
- Loudspeaker and microphone can be active simultaneously to provide excellent speech intelligibility
- Optimal ergonomic design
- Advanced discussion functionalities, such as the “Possible to speak” indicator, to immediately engage in the discussion when the function is available

Clear, natural sound
All DICENTIS conference devices use intelligent Acoustic Feedback Suppression which is unique to Bosch, maximizing intelligibility when higher volume levels are required. This technology helps to avoid echoes and howling, resulting in clear speech intelligibility.

In addition, the microphone and loudspeaker are active at the same time, providing a natural sound. At all times, the participants and chairperson can listen to the meeting comfortably and focus on the discussion at hand.

Pluggable microphones
Three pluggable microphones can be used with any DICENTIS conference device: Long Stem, Short Stem and the High directive microphones. The High directive microphone employs high directive Bosch technology, allowing for crystal-clear reproduction of the spoken word, while the discrete design helps the speaker to convey their message in a natural way.

For acoustically challenging locations, or for when people want to speak standing upright from a rostrum, the uni-directional Microphone with long or short stem is the best solution.

Encouraging clarity
Design plays a key role in how people interact and it is central to creating an environment that encourages constructive dialogue. That’s why Bosch has committed substantial resources to the research and development of the physical design of the DICENTIS conference devices. The result? Superior ergonomics, excellent ease of use, and a stylish yet unobtrusive appearance.

Keeping the meeting on track
The DICENTIS system is designed to optimize meeting structure and efficiency. Basic discussion settings can be defined for whichever DICENTIS conference device is being used. The meeting can be managed by an operator or chairperson, who can open or close a meeting, open voting rounds and decide which participant can speak and how many people can speak at the same time. The chairperson can also use the priority button to override all participant microphones whenever necessary.

Any conference device can be configured by software as either a participant or chairperson device, this minimizes the amount of necessary hardware and maximizes cost-efficiency.
DICENTIS Multimedia device

- User-friendly 7-inch high capacitive touchscreen to enhance the conference experience
- State-of-the-art award winning design
- Integrated Near Field Communication (NFC) Card Reader for quick participant identification and voting – participants can even use an existing registration card
- Two-way speaker system that offers outstanding intelligibility and sound quality
- Live video of the participant speaking can be followed on the device screens
- Internet access and document browsing to ensure that shared information is always up-to-date and that last minute corrections can be made on the spot

Inspiring interaction
The DICENTIS Multimedia device’s intuitive graphic user interface and easy to operate touchscreen enhances participant interaction and user comfort. Participants can follow the discussion in their own language, when simultaneous interpretation is provided. The touchscreen multimedia device integrates audio, video, meeting data, internet access and a highly convenient electronic voting facility. All this enables participants to contribute more efficiently in meetings by having access to related information or the internet on their individual touchscreen, while the chairperson remains in full control.

Attractive interface
DICENTIS Multimedia devices make use of the familiar Android™ operating system to provide an attractive and engaging interface. It also allows the use of custom-made or third-party apps to further increase meeting efficiency and for example the integration of room control.

Award-winning design
The stylish internet-enabled DICENTIS Multimedia device is elegant, ergonomic and complements any interior. The multimedia device has already won several prestigious awards, including a Red Dot design award in 2014 and the German design award in 2015.

You can follow the conference easily and speak in a natural way. All the information you need is at your fingertips.

Hear every word, every syllable
Extraordinary sound quality and intelligibility emits from the DICENTIS Multimedia device. Whether the source material is music or the spoken word. The special acoustic design with integrated two-way speaker systems reproduces the audio spectrum precisely. Bosch-engineered technologies further contribute to a more natural sound. Advanced equalization optimizes the acoustics throughout the room, while intelligent Acoustic Feedback Suppression technology from Bosch maximizes intelligibility when higher volume levels are required.

See every expression
The DICENTIS system supports multiple IP camera control protocols (e.g. ONVIF), simplifying the integration of automatic camera control. This enables participants to see the face of the speaker on their own screen.

Who’s who
A name card holder with magnetic attachments on the rear of the device makes it easy for delegates to identify who is talking. A very practical option if the delegates did not get acquainted before the meeting.
DICENTIS Discussion device with touchscreen

- 4.3 inch touchscreen shows the participant list, voting buttons and language selection, for increased meeting efficiency
- Integrated Near Field Communication (NFC) Card Reader for quick participant identification and voting – participants can even use an existing registration card
- Dual use minimizes the amount of necessary equipment - this saves costs and maximizes the space on the conference table

Speaking is only half of it
With its 4.3 inch capacitive touchscreen, the DICENTIS Discussion device with touchscreen guides participants and increases meeting efficiency. It achieves this by enabling the participants to see who is talking and who is in the queue. It can show a customer logo and enables the participant to follow the proceedings in their own language. It also provides access to the voting information.

Two languages simultaneously
Two participants can use one DICENTIS Discussion device with touchscreen, which offers discussion management, identification, voting and language selection to both individuals. Importantly, each of the two delegates can listen to the proceedings in their own language via headphones. They sign on with an NFC card which automatically will set their preferred user interface language and interpretation channel displayed in the native characters.
DICENTIS Discussion device with language selector

- Different languages are presented on the screen in native characters so that the delegate can easily find and select his language and focus on the meeting.
- Integrated Near Field Communication (NFC) Card Reader for quick participant identification – participants can even use an existing registration card
- Dual use minimizes the amount of necessary equipment - this saves costs and maximizing the space on the conference table

Quick and simple language selection
When interpretation of the meeting is provided, the delegate simply plugs in the headset and selects the preferred language before the conference starts. The language selection is very straightforward since it is shown only when needed. It is also provided in native characters so that the delegates can quickly find their language and do not miss out on the beginning of the conference. They can focus on the discussion at hand right from the start.

Two-in-one
The DICENTIS Discussion device with language selector allows for dual identification and dual discussion, with one shared language selection.

The DICENTIS Discussion device with language selector also has a built-in NFC Card Reader for quick participant identification. The delegate places an existing registration card in the vicinity of the device to identify to the system and automatically, the headphone language is selected.

Good readability of native characters and symbols on the selector screen makes it easy for the delegate to select their language.

Bosch High directive microphone improves intelligibility and allows delegates to participate in a natural way.

Volume control dial helps you hear every syllable when using your headphones.

The microphone button(s) ensure intuitive (dual/ chairperson) participation.

The DICENTIS Discussion device is a compact, lightweight and easy-to-use solution for language interpretation in conferences.
DICENTIS Discussion device with voting

- Colored voting touch buttons light up on each device only when the functionality is required, enabling the participants to vote easily and quickly
- Integrated Near Field Communication (NFC) Card Reader for quick participant identification and voting – participants can even use an existing registration card
- Secret voting is supported, guaranteeing non-influenced voting results

At the press of a button
Delegates vote by pressing one of the illuminated colored buttons on their device. Importantly, these buttons only appear when the voting is opened by the chairperson, this ensures that they do not distract the delegates during discussion.

Secret voting
The DICENTIS Discussion device with voting enables “Secret Voting”. In this setting, the voting LEDs will be rendered invisible the instant the delegate has cast their vote. This helps to ensure that participants cannot be influenced by the vote of a neighboring delegate.

DICENTIS Discussion device

- Facilitates basic conferencing with the “Possible to speak” indication to deliver the most straightforward use for all participants

The DICENTIS Discussion device enables participants to discuss, register a request-to-speak and listen to those speaking during the meeting. Like all DICENTIS conference devices this discussion device also provides the “Possible to speak” function. When this is indicated, the participant can start talking as soon as they press the button. This device also supports dual use by means of a software license, to provide a cost efficient and flexible conference solution. In this way you can achieve a perfectly adequate setup with only half the devices.

With its intuitive ease of use, unobtrusive microphone and crystal clear speech, the DICENTIS Discussion device ensures that all meeting participants can focus on the issues at hand.
Accommodating future interpretation needs with up to 100 languages

- Intuitive simultaneous interpretation solution with all system components – interpreter desk, flush language selector and all participant devices – seamlessly integrated
- Flexible configuration making it possible to increase the participant capacity by passive room coupling
- Flexibility and cost-effective installation and maintenance due to OMNEO IP based technology

Parliaments and international conventions
Participating in or running a meeting where delegates represent different languages and cultures is always a challenge. DICENTIS is specifically created to enhance the meeting management for all multi-lingual meetings where simultaneous interpretation is required, making it an ideal choice for parliaments and international conventions and events. All DICENTIS devices can be easily combined in one solution. Active conference participants can use the Discussion device with language selector, the Discussion device with touchscreen, or the Multimedia device to select their preferred language. Passive listeners can follow meeting proceedings on the Flush language selector in the language of their choice. Up to 100 interpreter-provided languages are supported, streamed from the DICENTIS Interpreter desk via an IP network to the DICENTIS Conference devices.

Flexible configuration
Today, international convention centers need more flexibility. The number of participants differ for each hosted event. Sometimes, more capacity is needed and meeting room accommodations need to be increased. That’s why the DICENTIS Conference system can easily be configured and reconfigured to increase the number of participants who can listen to the proceedings with passive-room coupling. Quite simply, the DICENTIS Conference system suits everyone’s needs at all times.

DICENTIS Interpreter desk

Speaking your language
Speaking the language of the interpreter, that’s what it is all about. By observing and interviewing expert interpreters and technicians worldwide, the design of the desk is optimized for the real-life needs of interpreters. The result? An ergonomic interpreter desk that complies with the latest as well as future market requirements and that provides the interpreter maximum freedom to focus on the job. The vertical Graphical User Interface on the passive high-contrast screen logically divides the sections for input and output languages in two columns. A simplified DICENTIS Interpreter desk interface, showing only the used functions, can be configured for less experienced users. During the entire interpreting process, only relevant information is displayed and unused features can be hidden. This means that the interpreter can observe the speaker’s non-verbal communication to provide the best possible interpretation.

Parliaments and international conventions
DICENTIS Interpreter desk

- Short stem microphone provides maximum speech intelligibility and is ideal for the interpreter desk
- HDMI video output makes easy connection with third party external screen possible so interpreters can see the current speaker or presentation.
- Tactile buttons and knobs for better control enable operation without even looking at the interpreter desk
- Optional audible feedback to guarantee easy operation, especially for visually impaired interpreters
- Compliant to latest simultaneous interpreting standard ISO-20109
- Intuitive operation based on logically divided language input and output sections, high contrast screen and the use of personal presets
- Three assignable buttons provide the interpreter with short key functions for quick and easy access to supporting functions such as “speak slow”, “replay”, “video select”, etc.
- An integrated NFC card reader enables the interpreter to quickly access his/her personal settings

Speaking your language
Speaking the language of the interpreter, that’s what it is all about. By observing and interviewing expert interpreters and technicians worldwide, the design of the desk is optimized for the real-life needs of interpreters. The result? An ergonomic interpreter desk that complies with the latest as well as future market requirements and that provides the interpreter maximum freedom to focus on the job. The vertical Graphical User Interface on the passive high-contrast screen logically divides the sections for input and output languages in two columns. A simplified DICENTIS Interpreter desk interface, showing only the used functions, can be configured for less experienced users. During the entire interpreting process, only relevant information is displayed and unused features can be hidden. This means that the interpreter can observe the speaker’s non-verbal communication to provide the best possible interpretation.
Easy installation and third party integration
The DICENTIS Conference System is a networked solution using state-of-the-art OMNEO IP technology, this means that existing network infrastructure and third party solutions (such as Dante™ audio) can be used and multiple video feeds can be distributed to the interpreters without extra cabling for video. Showing the facial expression of the speaker on one screen and at the same time displaying the meeting presentation on 2nd screen, can help interpreters to provide a more accurate interpretation. A third party external screen can be connected to the HDMI video output on the DICENTIS Interpreter desk.

Safe and secure
The Internationally recognized encryption standards that DICENTIS uses for all audio and data are also applied for interpreting. For highly sensitive meetings, this encryption offers the best protection against eavesdropping, unauthorized access and data tampering.

Future-proof
The DICENTIS Interpreter desk complies with ISO-20109, enforcing high quality and uniformity for interpreting equipment so interpreters know what to expect.

DICENTIS Flush language selector

The Joy of understanding
The DICENTIS Flush language selector is an intuitive device that serves passive listeners such as meeting delegates or journalists. Finished in black, the Flush language selector has a sleek form factor that will complement any interior, making it ideal for both modern and historic conference locations. An invisible mounting system adds to its aesthetic refinement. It shares the same installation footprint and layout as the renowned DCN Flush range from Bosch, allowing it to easily replace the DCN-FCS Flush channel selector without any further rework of the conference location. Additional design features utilize the latest technology to ensure a positive user experience. Touch buttons add to the streamlined look and feel of the device. The language selection functionality - with language ISO abbreviations or descriptions in native characters - is only visible when a headphone is connected and when interpretation languages are available. The bright screen automatically switches off seconds after use.

Flush integration (and configuration)
The new language selector integrates seamlessly with the DICENTIS Conference System platform, which is based on the powerful OMNEO* media networking architecture. Once connected, it automatically adopts the DICENTIS interpretation settings, ensuring efficient routing of the selected language. This is achieved instantly and requires no extra configuration or system restart.

Language descriptions in native characters and automatic language output settings make the device easy to understand and use.

Sleek flush-mount design with invisible mounting system

Automatically adopts the DICENTIS interpretation settings, ensuring efficient routing of the selected language

Shares the same installation footprint and layout as the renowned DCN-FCS Flush channel selector

red dot winner 2020
**Why choose the IP-based DICENTIS Conference System?**

The DICENTIS Conference System is the revolutionary IP-based platform for the integrated conference world of tomorrow. With an IP- and server-based architecture, it is built on open standards to ensure a high degree of flexibility, the most cost-efficient installation and maintenance and the ability for third-party integration. The system harnesses the most powerful security protection on the market to safeguard sensitive data throughout the conference chain.

Uncompressed digital audio for all system components results in superior, latency-free audio for up to 100 languages.

Standardized IP technology and software-based ecosystem assure a reliable, scalable and future-proof conference solution.

Internationally recognized encryption and open standard security technology assures the best protection against eavesdropping, unauthorized access and data tampering.

Tailored to your needs – small or large, standalone or integrated with complementary solutions, all supporting the system configuration of your choice.

Leverages standard IT infrastructure, server space, existing IT knowledge and allows for remote maintenance possibilities to reduce costs.
