Invented for life

# Enhance your security

## Video Verification

Get more peace of mind by adding valuable video monitoring services to your intrusion alarm system

Add monitored surveillance cameras with live agent Video Verification services to deliver a proactive security solution. With Video Verification your central monitoring station verifies alarms on your property. This reduces damage to your property and results in faster police response to alarms. Additionally, our solution allows you to choose from a wide range of cameras and to access live views from anywhere.

- Update your security system with a monitored camera
- Choose appropriate alarm response actions for your property
- Your central monitoring station takes care of your site, performing remote live intervention and triggering priority police response

### Remote live intervention to reduce damage

In case of an alarm, Video Verification allows your central monitoring station to review a 10 second recorded clip of the alarm.

- After verification of the alarm, the central monitoring station can connect to the cameras in real time.
- The operator can open an audio channel to talk to the site to prevent further intrusion and damage.

### Priority police response

Studies show that 95% to 99% of all alarms in the United States are false. To manage this shear volume, many jurisdictions give prioritized police response to alarms with verified video evidence. Response times to verified alarms are up to 15 minutes faster.

- Once the central monitoring station verifies the alarm, the operator can contact the proper authorities with video verified evidence.
- Video evidence eliminates false dispatches and false alarm fines.

### Ensure compliance

Video Verification can also be used to provide video evidence of non-alarm events. For example, to confirm who armed or disarmed the system allowing the manager to confirm that opening and closing procedures are followed.

### Live camera feeds

As an added benefit to this service, you can access live camera views on your smartphone and tablet simply by using the Site Monitor App, available for free from the Apple or Google Play store. The App gives you direct access to your cameras any time you wish to look in on your property or your employees.

### Equipment options (cameras and panels)

Your security dealer can select from the entire range of Bosch IP cameras and encoders to meet the needs of your installation. Cameras are available in a variety of models and designs, including bullet, box, dome and various features such as audio in and out and infrared lighting options for operation in low light conditions. All Bosch IP cameras and encoders are compatible with the entire family of Bosch B-Series and New G Series alarm panels.

### Meets industry standards

Bosch Video Verification service meets the CS-V-01 Alarm Verification & Notifications Procedure Standards as directed by the Security Industry Association (SIA) and the Central Station Alarm Association (CSAA), providing a seamless integration between the intrusion alarm system, the Monitoring Center and the end-user.

### A Tradition of Quality and Innovation

For over 125 years, the Bosch name stands for quality and reliability. Bosch is the global supplier of choice for innovative technology, backed by the highest standards for service and support.
